Attention: Mr. James O'Malley

Subject: Phase I and Limited Phase II Environmental Site Assessment
Proposed Residential Development
APN 144-111-01
16300 Euclid Street
Fountain Valley, California

Leighton and Associates, Inc. (Leighton) is pleased to present this Phase I and Limited Phase II Environmental Site Assessment Report for the property located at 16300 Euclid Street in the city of Fountain Valley, California (subject site). Leighton declares that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 Code of Federal Regulations (CFR) 312, and the ASTM International (ASTM) Standard E1527-13.

Leighton has the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject site. Leighton has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

If you have questions regarding this report, please contact us. We appreciate the opportunity to be of service to Shopoff Advisors, LP.

Respectfully submitted,

LEIGHTON AND ASSOCIATES, INC.

1.0 INTRODUCTION

1.1 Authorization

Leighton and Associates, Inc. (Leighton) performed a Phase I and Limited Phase II Environmental Site Assessment (ESA) of the property located at 16300 Euclid Street in the city of Fountain Valley, Orange County, California (subject site – Figure 1) in accordance with the authorization of Shopoff Advisors, LP (Shopoff).

1.2 Purpose

The purpose of the Phase I ESA was to identify, to the extent feasible and pursuant to the processes prescribed in ASTM International (ASTM) E1527-13, recognized environmental conditions (RECs), historical RECs (HRECs), or controlled RECs (CRECs) in connection with the subject site.

RECs are defined, according to ASTM E1527-13 as "*the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not RECs.*"

HRECs are defined, according to ASTM E1527-13 as "*a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.*"

CRECs are defined, according to ASTM E1527-13 as "*a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.*" (ASTM E1527-13, 2013).

The purpose of the Limited Phase II ESA was to identify potential impacts to subsurface media (soil and groundwater) resulting from the historic use of the property as agricultural land that may present a health risk to future occupants of the subject site.

DRAFT

1.3 Scope of Work

The scope of work was performed in accordance with Leighton's Phase I and Limited Phase II ESA proposals dated August 16 and 25, 2021 and included the following tasks:

- A reconnaissance-level visit of the subject site for evidence of the release(s) of hazardous materials and petroleum products and to assess the potential for onsite releases of hazardous materials and petroleum products;
- Records review (including review of previous environmental reports, selected governmental databases, and historical review);
- Interviews;
- Collection of soil and groundwater samples for chemical analysis; and
- Preparation of this report presenting our findings.

1.4 Significant Assumptions

Leighton assumes that the information provided by the Client and its agents, regulatory database provider, and regulatory agencies is true and reliable.

1.5 Limitations and Exceptions

Leighton performed the Phase I and Limited Phase II ESA in conformance with the scope and limitations of ASTM E1527-13. Other than the non-scope items shown in Section 1.6 that were not applicable, there were no exceptions to, or deletions from, this practice.

Property specific activities performed by Leighton and information collected regarding these activities are summarized within this report. The findings of the Phase I and Limited Phase II ESA are presented in Section 8.0. Opinions, and conclusions drawn by Leighton, based on the information collected as part of the Phase I ESA, are presented in Sections 9.0 and 10.0, respectively. References are included as Appendix A. Subject site photographs are presented in Appendix B. Completed interview forms are included as Appendix C. The Environmental Lien and Activities and Use Limitations (AUL) Search report is included in Appendix D. The Environmental Radius Report and Vapor Encroachment

DRAFT

Screen are included as Appendix E. Historical documentation is provided in Appendix F. Laboratory analytical reports are included in Appendix G.

This Phase I and Limited Phase II ESA was conducted in a manner consistent with the level of care and skill ordinarily exercised by members of the profession currently practicing in the same locality under similar conditions.

The observations and conclusions presented in this report are professional opinions based on the scope of activities, work schedule, and information obtained through the Phase I and Limited Phase II ESA described herein. Opinions presented herein apply to property conditions existing at the time of our study and cannot necessarily be taken to apply to property conditions or changes that we are not aware of or have not had the opportunity to evaluate. It must be recognized that conclusions drawn from these data are limited to the amount, type, distribution, and integrity of the information collected at the time of the investigation, the methods utilized to collect and evaluate the data, and that a full and complete determination of environmental risks cannot be made. Although Leighton has taken steps to obtain true copies of available information, we make no representation or warranty with respect to the accuracy or completeness of this information.

This practice does not address whether requirements in addition to all appropriate inquiry have been met in order to qualify for the landowner liability protections including the continuing obligation not to impede the integrity and effectiveness of activity and use limitations, or the duty to take reasonable steps to prevent releases, or the duty to comply with legally required release reporting obligations. Users should also be aware that there are likely to be other legal obligations with regard to hazardous substances or petroleum products discovered on the subject site that are not addressed in this practice and that may pose risks of civil and/or criminal sanctions for non-compliance.

1.6 Special Terms and Conditions

The scope of work for this Phase I and Limited Phase II ESA did not include testing of electrical equipment for the presence of polychlorinated biphenyls (PCBs) or collection of other environmental samples such as building materials, paint, or other media; assessment of natural hazards such as naturally occurring asbestos, radon gas or methane gas; assessment of the potential presence of radionuclides; or assessment of nonchemical hazards such as the potential for

DRAFT

damage from earthquakes or floods, or the presence of endangered species or wildlife habitats. This Phase I and Limited Phase II ESA also did not include an assessment of the environmental compliance status of the subject site or of businesses operating at the subject site.

1.7 User Reliance

This report is for the exclusive use of Shopoff and its project team members. Use of this report by any other party shall be at such party's sole risk.

1.8 Important Information about Geoenvironmental Reports

The Users of this report are referred to Appendix H regarding important information provided by Geoprofessional Business Association (GBA) on geoenvironmental studies and reports.

DRAFT

2.0 SITE DESCRIPTION

2.1 Location and Legal Description

The subject site is located at the northeast corner of Euclid Street and Heil Avenue, at the address of 16300 Euclid Street in the city of Fountain Valley, Orange County, California (Figure 1, Site Location Map). The Orange County Assessor's office designated the subject site as Assessor Parcel Number (APN) 144-111-01. A legal description for the subject site is included in the Environmental Lien and AUL Search Report attached in Appendix D.

2.2 Subject Site Vicinity General Characteristics

The subject site vicinity is comprised primarily of residential properties, with a large park (Mile Square Regional Park) to the west of the subject site.

2.3 Current Use of the Subject Site

The subject site is an approximately 19-acre lot that is currently used for agricultural purposes (Appendix B, Photos 1 through 16).

2.4 Descriptions of Structures, Roads and Other Improvements on the Property

The southwestern corner of the subject site is developed with an approximately 10,000 square foot gravel parking lot with a small fruit stand. The southern and western boundaries of the subject site are enclosed with chain link fence, and two electric poles are present in the northwest corner of the subject site. One groundwater well is also located in the northwest portion of the subject site.

The following utilities provide service to the subject site.

Natural Gas:	Southern California Gas Company
Source of Potable Water:	Water Well
Electric:	Southern California Edison
Sewage Disposal:	N/A
Heating/Cooling System:	N/A
Solid Waste Disposal:	Republic Services

DRAFT

2.5 Current Uses of Adjoining Properties

The subject site is bordered to the north and east by residential properties; to the south by Heil Avenue, followed by residential properties; and to the west by Euclid Street, followed by Mile Square Regional Park.

DRAFT

3.0 USER PROVIDED INFORMATION

The user of this Phase I ESA is identified as Shopoff. As a part of the ASTM E1527-13 process, Mr. Blair Ruffner completed a questionnaire for the subject site. A copy of this questionnaire is provided in Appendix C.

3.1 Environmental Liens or Activity and Use Limitations

Mr. Ruffner was not aware of environmental liens or AULs recorded for the subject site.

Environmental liens or AULs were not identified in the Environmental Lien and AUL Search report provided by EDR, dated August 19, 2021. A copy of the Environmental Lien and AUL Search report is included in Appendix D.

3.2 Specialized Knowledge

Mr. Ruffner does not have any specialized knowledge or experience with the subject site or nearby properties.

3.3 Commonly Known or Reasonably Ascertainable Information

Mr. Ruffner was aware of historic use of the subject site as agricultural land and the findings and conclusions presented in the 2015 Phase I ESA prepared for the subject site, summarized in Section 4.2.5 of this report.

3.4 Valuation Reduction for Environmental Issues

Mr. Ruffner indicated that the purchase price being paid for the subject site is based on fair market value.

3.5 Owner, Property Manager, and Occupant Information

According to the Environmental Lien and AUL Search report, the subject site is currently owned and managed by M. Westland, LLC. The subject site is currently occupied by a farm.

DRAFT

3.6 Reason for Performing Phase I ESA

According to Mr. Ruffner the reason for requesting this Phase I ESA is for due diligence purposes related to the purchase of the subject site.

3.7 Other

A previous Phase I ESA, completed by Kimley-Horn in July 2015, was provided by Shopoff. A summary of this report is provided in Section 4.2.5 of this report.

4.0 RECORDS REVIEW

4.1 Physical Setting Source(s)

Leighton reviewed pertinent maps and readily available literature for information on the physiography and hydrogeology of the subject site. A summary of this information is presented in the following subsections.

4.1.1 Topography

The subject site is located in Section 31 of Township 5 South, Range 10 West of the San Bernardino Baseline and Meridian. Topographic map coverage of the subject site vicinity is provided by the United States Geological Survey (USGS) Newport Beach, California Quadrangle (2012). The elevation of the subject site is approximately 45 feet above mean sea level and the topography of the subject site is relatively flat. The topography of the surrounding vicinity slopes gently toward the southwest; however, there is local variability in gradient.

4.1.2 Surface Water

Surface water was not observed on the subject site. A drainage channel is located approximately 0.25 miles south of the subject site. The Santa Ana River is located approximately 0.9 miles southeast of the subject site.

4.1.3 Geology and Soils

The subject site is located on the lowest reach of the Santa Ana River basin within the Peninsular Ranges geomorphic province. The Peninsular Ranges geomorphic province extends southward from the Los Angeles Basin to the tip of Baja California (Yerkes et al., 1965) and is characterized by elongated northwest-trending mountain ranges separated by sediment-floored valleys. The most dominant structural features of the province are the northwest trending fault zones, most of which die out, merge with, or are terminated by the steep reverse faults at the southern margin of the Transverse Ranges geomorphic province. East of the subject site are the northwest-trending Santa Ana Mountains, a large range that has been uplifted on its eastern side along the Whittier-Elsinore Fault Zone, producing a tilted, irregular highland that slopes westward toward the sea.

DRAFT

Approximately 65 million years ago (at the end of the Cretaceous Period) a deep, structural trough existed off the coast of southern California (Yerkes, 1972). Over time the trough was filled with sediments eroded from the surrounding highlands and mountains. About 7 million years ago the boundary between the Pacific and North American plates shifted to its present position and the geologically modern Los Angeles basin began to form. The deepest part of the Los Angeles basin contains Tertiary to Quaternary-aged (65 million years and younger) marine and non-marine sedimentary rocks that are about 24,000 feet thick (Yerkes, et al, 1965; Wright, 1991). During the Pleistocene epoch (the last two million years) the region was flooded as the sea level rose in response to the worldwide melting of the Pleistocene glaciers depositing sediments across the Los Angeles Basin during transgression and regression of sea level.

The area south and west of the Santa Ana Mountains is generally characterized as a broad, complex, alluvial fan which receives sediments from the Santa Ana River and its tributaries draining the Santa Ana and San Bernardino Mountains. These sediments are comprised of relatively flat-lying, unconsolidated to loosely consolidated clastic deposits that are approximately 3,000 feet thick beneath the subject site (Sprotte et al., 1980, and Real, 1985). The subject site is located approximately 0.9 mile west of the Santa Ana River. Regional geologic mapping of the subject site and vicinity indicates that near-surface native soils beneath the subject site consist of Quaternary age (Holocene) young alluvial fan deposits comprised of varying proportions of sand, silt and clay (Morton and Miller, 2006).

Leighton conducted a concurrent Limited Phase II ESA at the subject site. Silty sand to sand was primarily encountered in the upper 10 feet of soil. Silt to silty clay was encountered from approximately 10 to 12 feet below ground surface (bgs). The deepest boring advanced during our Phase II ESA reached a maximum depth of 12 feet bgs.

4.1.4 Hydrogeology

According to groundwater information obtained through the California Geological Survey (CGS) and presented in the Seismic Hazard Zone Report for the Anaheim and Newport Beach 7.5-Minute Quadrangles

DRAFT

(CGS, 1997), the historically shallowest groundwater depth in the vicinity of the project site is approximately 4 feet bgs. In addition, based on review of available groundwater information from the California Department of Water Resources Water Data Library (DWR, 2021) for a nearby groundwater monitoring well located approximately 0.4 miles to the southwest of the project site (State Well # 05S10W21M002S), the shallowest groundwater level measured for a monitoring period between November 1969 and October 2010 was approximately 12.3 feet bgs.

During our concurrent Limited Phase II ESA, groundwater was encountered at a depth of approximately 6 feet bgs at the subject site. Groundwater in the subject site vicinity general flows toward the southwest.

4.1.5 Oil and Gas Fields

Leighton reviewed the California Department of Conservation, Division of Oil, Gas, and Geothermal Resources (DOGGR), Online Mapping System, on September 10, 2021. Evidence of oil wells or oil field-related facilities was not indicated on the subject site or within 0.25-miles of the subject site.

4.2 Standard Environmental Record Sources

A search of selected government databases was conducted by Leighton using the EDR Radius Map™ Report with GeoCheck® environmental database report system. Details and descriptions of the database search are provided in the EDR database report. The database report meets the government records search requirements of ASTM E1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. The database listings were reviewed within the specified radii established by the ASTM E1527-13. A copy of this report is included in Appendix E.

4.2.1 Subject Site

The subject site was not identified in the EDR database report.

4.2.2 Offsite

Information in the EDR database report was reviewed for facilities of potential environmental concern to the subject site. Additionally, the

DRAFT

SWRCB Geotracker website and Department of Toxic Substances Control (DTSC) Envirostor website were used to supplement the information in the EDR database report.

The database search results for offsite properties, including those found within the “orphaned” unmapped listings, with potential to adversely impact the subject site, are listed in the table below:

DRAFT

A drycleaners, Annex Cleaners, is mapped in the EDR Radius Map at 16338 Mount Dana Circle, approximately 179 feet north of the subject site. However, at this address is a single-family residence and based on review of historical resources has been a residence since at least the early 1970s. Prior to the residential use, the property was used as agricultural land. Given this information, this listing is considered incorrectly located and is not a potential offsite REC or vapor encroachment concern to the subject site.

The remaining listings identified in the EDR database report were reviewed and not interpreted to represent an adverse effect to the subject site at the time of this report preparation based on one or more of the following:

- Type of release (soil only);
- Closure received from regulatory agency;
- Distance of the facility to the subject site; and
- Direction of groundwater flow (southwest) and location of the facility to the subject site (cross-gradient or down-gradient).

4.2.3 Vapor Encroachment

Leighton reviewed the Vapor Encroachment Screen (VES) produced using EDR's Vapor Encroachment Worksheet application that gathers regulatory database information from the accompanying Radius Report and allows the user to integrate groundwater information, regional geology, and other information to evaluate the concern for potential vapor encroachment from onsite activities and from adjacent properties. The VES application was designed by EDR to assist parties seeking to meet the search requirements of the ASTM Standard Practice for Assessment of Vapor Encroachment into Structures on Property Involved in Real Estate Transactions (E2600-10), also referred to as the Tier 1 VES, as defined by ASTM E2600-10.

No offsite facilities with potential vapor encroachment concern were identified in the EDR database report. A copy of the VEC report has been included as Appendix E.

DRAFT

4.2.4 Regulatory Agency Contacts

On August 20, 2021, Leighton requested regulatory records for the subject site address 16300 Euclid Street. The following agencies were contacted or their respective online databases were researched:

- DTSC (Cypress and Chatsworth offices);
- Orange County Sanitation District (OCSD);
- Regional Water Quality Control Board – Santa Ana Region (SA-RWQCB);
- The City of Fountain Valley
- Orange County Health Care Agency (OCHCA)
- South Coast Air Quality Management District (SCAQMD); and
- National Pipeline Mapping System (NPMS).

Records or pipelines were not found for the subject site at the agencies contacted.

4.2.5 Other Reports

Kimley-Horn prepared a Phase I ESA for the subject site in July 2015. At the time of their Phase I ESA, the subject site operated as a farm and produce stand. Based on the findings of their Phase I ESA, Kimley-Horn identified the following RECs associated with the subject site:

- The past agricultural land use is considered a REC. The customary and legal application of herbicides, pesticides, and fertilizers, in conjunction with the agricultural land use, may have contributed to the potential degradation of the soil quality on the Site.

- Soil staining associated with the well pump was observed. Given the potential for soil contamination associated with petroleum hydrocarbons from the pump, this area represents a REC.

- Soil staining associated with vehicle storage was observed. Given the potential for soil contamination associated with petroleum hydrocarbons from the pump, this area represents a REC (Kimley-

DRAFT

Horn, 2015).

The current and historic agricultural use of the subject site was assessed during our Limited Phase II ESA summarized in Section 7.0. It should be noted that petroleum hydrocarbon staining observed by Leighton in the vicinity of the well head and farming vehicles was determined to be *de mininis*.

4.3 Historical Use Information on the Property

Leighton reviewed selected historical information on the subject site. These references were reviewed for evidence of activities, which would suggest the presence of hazardous substances at the subject site and to evaluate the potential for the subject site to be impacted by offsite sources of contamination. The historical records researched are included in Appendix F. The following paragraphs are a chronological summary of the review.

4.3.1 Aerial Photographs

Historical aerial photographs were reviewed for information regarding past subject site uses. Aerial photographs dated 1938, 1947, 1953, 1963, 1972, 1977, 1987, 1990, 1994, 1995, 2005, 2009, 2012, and 2016 provided by EDR, were reviewed. Copies of these photographs are included in Appendix F.

In the **1938** aerial photograph, a residence and associated garage are observed in the northwest portion of the subject site. The remainder of the subject site appears to be used as agricultural land. A northeast-southwest trending creek transects eastern and central portion of the subject site. Few scattered residences and agricultural land are observed on surrounding properties.

In the **1947, 1953,** and **1963** aerial photographs, a residence and associated garage are observed in the northwest portion of the subject site. The remainder of the subject site appears to be used as dry farming land. The creek is no longer observed in the eastern and central portion of the subject site. Few scattered residences and agricultural land are observed on surrounding properties.

DRAFT

In the **1972** aerial photograph, no land use changes are observed on the subject site. Residential properties are observed to the north, east, and south of the subject site. Mile Square Regional Park and agricultural land are observed to the west of the subject site.

In the **1977, 1987, 1990,** and **1994** aerial photographs, no land use changes are observed on the subject site. Residential properties are observed to the north, east, and south of the subject site. Mile Square Regional Park is observed to the west of the subject site.

In the **1995, 2002, 2005, 2009, 2012,** and **2016** aerial photographs, the structure in the northwestern portion has been demolished. The subject site is observed to be used as agricultural land. Land use changes are not observed on the surrounding properties.

4.3.2 Historical Topographic Maps

Historical topographic maps provided in the EDR Historical Topographic Map Report were reviewed for information regarding past subject site uses, and include the following quadrangles: Santa Ana (1896, 1901, and 1942), Corona (1902), and Newport Beach (1932, 1935, 1949, 1951, 1965, 1972, 1981, and 2012). Copies of these maps are provided in Appendix F.

1896, 1901, and **1902:** No structures, tanks, or wells are depicted on the subject site. A northeast-southwest trending creek is depicted crossing the eastern portion of the subject site. Scattered structures are depicted in the surrounding vicinity.

1932 and **1935**: No structures, tanks, or wells are depicted on the subject site. Scattered structures are depicted in the surrounding vicinity. Verano Street (present-day Euclid Street) is depicted adjacent to the west.

1942: One structure is depicted in the northwest portion of the subject site. Increased numbers of scattered structures are depicted along major roads in the subject site vicinity.

1949 and **1951**: Significant land use changes are not depicted on the subject site. The subject site vicinity is primarily depicted as vacant land or agricultural land. A Naval Reservation is depicted to the west of the subject site, across Verano Street.

DRAFT

1965: Significant land use changes are not depicted on the subject site. Adjacent to the northeast corner of the subject site is an area depicted with red shading indicating a densely developed housing tract. Within this tract, Monroe School is depicted. Adjacent to the west of the subject site, Verano Street has been renamed Euclid Street. Areas of dense residential development with scattered schools are depicted north of Edinger Avenue. West of the subject site, the Naval Reservation is now depicted as a Landing Field.

1972: Significant land use changes are not depicted on the subject site. Dense residential development is depicted adjacent to the north, east, and south sides of the subject site. Heil Avenue is depicted adjacent to the south of the subject site. A Landing Field and golf course are depicted to the west of the subject site, across Euclid Street.

1981: Significant land use changes are not depicted on the subject site and surrounding properties with the exception that the Landing Field to the west is depicted as Mile Square Field (closed).

2012: No buildings are depicted on the topographic map. Euclid Street is depicted to the west of the subject site and Heil Avenue is depicted to the south of the subject site.

4.3.3 Fire Insurance Maps

Fire insurance maps, or Sanborn® maps, are detailed city plans showing building footprints, construction details, use of structure, street address, etc. The maps were designed to assist fire insurance agents in determining the degree of hazard associated with a particular property. Sanborn Maps were produced from approximately 1867 to the present for commercial, industrial, and residential sections of approximately 12,000 cities and towns in the United States.

Sanborn Fire Insurance Maps for the subject site vicinity have not been published. A copy of this report has been provided in Appendix F.

4.3.4 Historical City Directories

City Directories have been published for cities and towns across the US since the 1700s. Originally a list of residents, the City Directory developed

DRAFT

into a tool for locating individuals and businesses in particular. For each street address listed, the directory recorded the name of the resident or business that operated from this addresses. While City Directory coverage is usually comprehensive for major cities, it may be sporadic for rural areas and small towns. The purpose of the City Directory research was to attempt to determine the businesses that were historically located at the subject site and adjacent addresses.

Leighton reviewed the EDR City Directory Abstract dated August 19, 2021 (Appendix F). Records were reviewed from 1965 to 2017 at approximate 5-year intervals. The subject site address was not identified in the city directory search.

Mile Square Park was first identified at 16801 Euclid Street in the 1973 city directory. No businesses of concern were listed for the surrounding properties.

4.3.5 Building Department Records

Building permit records for the subject site address were reviewed in the EDR Building Permit Report. No permits were found for the subject site. No permits of concern were identified for the neighboring properties.

4.3.7 Summary of Historical Land Use

Based on historical records, land usage is summarized as follows:

Time Period	Land Usage	Reference
Prior to 1896	Unknown	None Available
Approximately 1896 to 1995	Agricultural land with a residence and garage in the northwest portion	Topographic Maps Aerial Photographs
Approximately 1995 to present	Agricultural land	Topographic Maps Aerial Photographs Site Reconnaissance

DRAFT

5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

On September 2, 2021, a representative of Leighton conducted a reconnaissance–level assessment of the subject site, which consisted of observing and documenting existing conditions of the subject site and nature of the neighboring development. Photographs of the subject site are presented in Appendix B and their view directions are noted on Figure 2. Items noted during the subject site reconnaissance are also depicted on Figure 2.

5.2 General Property Setting

The subject site is an approximately 19-acre lot that is developed for agricultural use (Appendix B, Photos 1 through 16). The southwestern corner of the subject site is developed with an approximately 10,000 square foot gravel parking lot with a small fruit stand. The southern and western boundaries of the subject site are enclosed with chain link fence, and two electric poles are present in the northwest corner of the subject site. One groundwater well is also located in the northwest portion of the subject site.

5.3 Exterior and Interior Observations

5.3.1 Hazardous Substances, Drums, and Other Chemical Containers

Seven containers, 5 gallons or less in size, of hazardous substances (oil, gasoline, and paint) were observed in the northwest portion of the subject site. The containers were stored on pallets and no evidence of a significant release was observed on the soil beneath the containers. These containers are not considered a REC associated with the subject site.

Two 5-gallon buckets of hydraulic oil were observed in the northwest portion of the subject site, adjacent to the onsite water well. No evidence of a significant release was observed on the soil beneath the buckets. These buckets of hydraulic oil are not considered a REC associated with the subject site.

DRAFT

Two steel storage containers are located in the northwest portion of the subject site. Access was not granted to these storage containers during the subject site reconnaissance; however, the onsite farmers stated that fertilizers, soil, minor amounts of pesticides, and tools are stored within the containers. No evidence of a significant release was observed on the soil around the containers. One boring was drilled near the containers during our Limited Phase II ESA and no significant contamination was identified. These containers are not considered a REC associated with the subject site.

5.3.2 Storage Tanks

One approximately 75-gallon steal aboveground storage tank (AST) was observed in the northwest portion of the subject site. The AST was stored on pallets and evidence of a minor release was observed on the soil beneath the AST. One boring was drilled within the stained area during our Limited Phase II ESA and no significant contamination was identified. This AST is not considered a REC associated with the subject site.

Two empty plastic ASTs, approximately 100 to 250 gallons in size, were observed within the northwest portion of the subject site. According to the onsite farmers, one AST was previously used to store water and the other was used to store pesticides. No evidence of a significant release was observed beneath the ASTs. Four borings were drilled within the area of the ASTs during our Limited Phase II ESA and no significant contamination was identified. These ASTs are not considered a REC associated with the subject site.

Two steel ASTs, approximately 250 gallons in size, were observed mounted to a tractor in the northwest portion of the subject site. According to the onsite farmers, the ASTs are used to apply fertilizer to the fields. No evidence of a significant release was observed beneath the ASTs. Four borings were drilled within the area of the ASTs during our Limited Phase II ESA and no significant contamination was identified. These ASTs are not considered a REC associated with the subject site.

One plastic AST, approximately 250 gallons in size, was observed in the northwest portion of the subject site, near the existing water well. According to the onsite farmers, the AST is used to store fertilizer. No

DRAFT

evidence of a significant release was observed beneath the AST. Four borings were drilled within the area of the AST during our Limited Phase II ESA and no significant contamination was identified. This AST is not considered a REC associated with the subject site.

Evidence of underground storage tanks (USTs) (such as vent lines, fill or overfill ports) was not observed on the subject site.

5.3.3 Polychlorinated Biphenyls (PCBs)

No transformers or other equipment known to contain PCBs were observed onsite.

5.3.4 Waste Disposal

Waste generated onsite is removed on a weekly basis by Republic Services.

5.3.5 Dumping

Evidence of dumping was not observed on the subject site.

5.3.6 Pits, Ponds, Lagoons, Septic Systems, Wastewater, Drains, Cisterns, and Sumps

Evidence of pits, ponds, lagoons, septic systems, and drains was not observed on the subject site.

A concrete water cistern was observed in the northwest portion of the subject site. According to the onsite farmers, water is not currently stored in the cistern and the cistern is dry.

5.3.7 Pesticide Use

Evidence of pesticide use was observed on the subject site and assessed as part of our Limited Phase II ESA. See Section 7.0 of this report for a summary of the Limited Phase II ESA.

5.3.8 Staining, Discolored Soils, Corrosion

Evidence of staining, discolored soils, or corrosion was not observed on the subject site.

DRAFT

5.3.9 Stressed Vegetation

Evidence of stressed vegetation was not observed on the subject site.

5.3.10 Unusual Odors

Unusual odors were not detected on the subject site.

5.3.11 Onsite Wells

Oil and gas production wells were not observed on the subject site.

One groundwater well is located in the northwest portion of the subject site. A minor, *de minimis*, amount of petroleum hydrocarbon staining was observed on the surficial soils surrounding the well head. The stained was limited to area directly around the well head and was limited to the upper 6 inches. This stained material is considered a *de minimis* condition.

5.3.12 Other Observations

No other observations of environmental concern were noted on the subject site.

DRAFT

6.0 INTERVIEWS

Leighton conducted interviews with persons having knowledge of current or past subject site usage. Interviews were conducted either orally or in the form of a written questionnaire. Written responses, if any, are included as Appendix C.

6.1 Interview with Owner

A Phase I ESA Owner/Site Contact Interview Form was completed by Mr. Bradford Sublett on August 24, 2021. Mr. Sublett is a representative of the currently owner of the subject site, M Westland, LLC. Mr. Sublett was not aware of any environmental concerns associated with the subject site or surrounding properties. He was aware of a previous Phase I ESA prepared for the subject site, the current agricultural use of the subject site, and the water well located in the northwest portion of subject site.

6.2 Interview with Property Manager

See Section 6.1.

6.3 Interviews with Occupants

Information provided by the current occupants, farmers, is summarized in Section 5.3 of this report.

6.4 Interviews with Local Government Officials

Leighton did not interview employees with local government agencies to request information regarding historic and current uses of the subject site with the exception of those noted in Section 4.2.

6.5 Interviews with Others

Leighton did not conduct additional interviews for this Phase I ESA.

DRAFT

7.0 LIMITED PHASE II ESA

On September 2 and 3, 2021, Leighton completed a Limited Phase II ESA of the subject site. Our scope of work for this assessment included the testing of soil and groundwater throughout the subject site for organochlorine pesticides (OCPs) and arsenic that may be present in the near surface soil due to the current and historical agricultural use of the property. Additionally, soil samples collected in the vicinity of the diesel AST in the northwest portion of the subject site were assessed for the presence of petroleum hydrocarbons.

The scope of work for the Limited Phase II ESA is described below.

7.1 Pre-Field Activities

7.1.1 Health and Safety Plan

A Site Specific Health and Safety Plan (HSP), which included safety aspects of the work to be performed at the subject site was prepared in compliance with the Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1910.120 and California Code of Regulations 5192. The HSP was onsite with Leighton personnel at all times. The HSP outlined all subject site procedures, potential hazards, and contained a hospital location map. All onsite Leighton personnel acknowledged acceptance of the plan by signing the HSP.

7.1.2 Utility Clearance

Underground Service Alert (USA) was contacted two business days prior to the commencement of fieldwork to mark public underground utility locations. Each proposed boring location was clearly marked in white paint or painted white stakes prior to contacting USA.

7.2 Field Activities

7.2.1 Drilling and Soil Sampling

On September 2 and 3, 2021, Leighton directed the advancement of 29 soil borings (ENV1 through ENV29) to a total depth of at least 5 feet bgs throughout the subject site (Figure 3, Boring Location Map). Five borings were advanced to a depth of approximately 10 to 12 feet bgs in an attempt

DRAFT

to collect a grab groundwater sample. The borings were advanced using hand auger and direct push drilling equipment operated by JHA Remediation, LLC, a State of California licensed drilling contractor. Soil samples were collected at depths of 0.5, 2.5, and 5 feet bgs from each boring.

Soil samples were retained in 8-ounce laboratory-supplied glass jars or acetate sleeves covered with a Teflon sheet and plastic end caps. The containers were clearly marked with sample identification, placed in an ice-cooled chest for temporary storage, and transported to Jones Environmental Inc., a California State Accredited Environmental Laboratory (ELAP No. 2882) for chemical analysis. Chain-of-custody protocol was followed throughout all phases of the sample handling process.

7.2.2 Grab Groundwater Sampling

Grab groundwater samples were collected from borings ENV2, ENV6, ENV15, ENV19 and ENV21. Groundwater was encountered at a depth of approximately 6 feet bgs during our Limited Phase II ESA. Approximately 5 feet of slotted PVC was installed within the open borehole from 5 to 10 feet bgs. Grab groundwater samples were collected using new dedicated tubing lowered through the PVC. A peristaltic pump was used to bring the groundwater samples to the surface through the tubing and into laboratory-supplied containers with proper preservative.

7.3 Laboratory Analysis

Soil samples collected from three or four adjacent borings at depths of 0.5 and 2.5 feet bgs were composited by Jones (by depth) and analyzed for OCPs by EPA Method 8081A.

Sixteen discrete soil samples (non-composited), one from each composite group, were analyzed for arsenic by EPA 6010B.

The soil samples collected at depths of 0.5 to 2.5 feet bgs from boring ENV1 (adjacent to the diesel AST) were analyzed for total petroleum hydrocarbons (TPH) as gasoline, diesel, and oil by EPA Methods 8260B and 8015M.

DRAFT

Grab groundwater samples were analyzed for OCPs by EPA Method 8081A and arsenic by EPA Method 6010.

7.4 Soil Analytical Results

The soil analytical results were compared to one or more of the following regulatory screening criteria:

- The EPA Residential Regional Screening Levels (RSLs, May 2021) for OCPs and TPH;
- The DTSC Southern California Background concentration of 12 milligrams per kilogram (mg/kg) for arsenic; and
- The DTSC Office of Human and Ecological Risk (HERO) Note Number 3 Screening Levels (DTSC-SL) (June 2020) for OCPs and TPH.

The complete laboratory reports are included in Appendix G. A summary of soil laboratory detections is presented in Table 1.

7.4.1 Arsenic

Arsenic was not detected in the 16 soil samples analyzed during this investigation at concentrations above laboratory detection limits.

7.4.2 Organochloride Pesticides

Two OCPs were detected above the laboratory reporting limits in one or more of the 16 composite soil samples analyzed during this investigation. The maximum concentrations of the two OCPs detected during this investigation are presented below (the screening level is identical between the RSL and the DTSC-SL):

OCP	Maximum Concentration (µg/kg)	Screening Level (µg/kg)	Composite-adjusted SL (µg/kg)	Sample
4,4'-DDE	130	2,000	500	COMP2-0.5
4,4'-DDT	33	1,900	475	COMP1-0.5

No OCPs were detected at concentrations exceeding a residential

DRAFT

screening level. OCP analytical results are summarized in Table 1.

7.4.3 Total Petroleum Hydrocarbons

TPH was not detected in the two soil samples analyzed from boring ENV1 at concentrations above laboratory detection limits.

7.5 Groundwater Results

Groundwater analytical results were compared to the California Maximum Concentration Limits (MCLs) for drinking water. The results of the laboratory analyses of groundwater samples collected during this investigation are summarized in Appendix G and below:

7.5.1 Organochloride Pesticides

OCPs were not detected in the five grab groundwater samples at concentrations above laboratory detection limits.

7.5.2 Arsenic

Arsenic was not detected in the five grab groundwater samples at concentrations above laboratory detection limits.

8.0 FINDINGS

Leighton performed a Phase I and Limited Phase II ESA of the property located at 16300 Euclid Street in the city of Fountain Valley, Orange County, California (subject site – Figure 1) in accordance with Shopoff's authorization.

8.1 Onsite

The subject site is an approximately 19-acre lot that is developed for agricultural use (Appendix B, Photos 1 through 16). The southwestern corner of the subject site is developed with an approximately 10,000 square foot gravel parking lot with a small fruit stand. The southern and western boundaries of the subject site are enclosed with chain link fence, and two electric poles are present in the northwest corner of the subject site. One groundwater well is also located in the northwest portion of the subject site.

Seven containers, 5 gallons or less in size, of hazardous substances (oil, gasoline, and paint) were observed in the northwest portion of the subject site. The containers were stored on pallets and no evidence of a significant release was observed on the soil beneath the containers. These containers are not considered a REC associated with the subject site.

Two 5-gallon buckets of hydraulic oil were observed in the northwest portion of the subject site, adjacent to the onsite water well. No evidence of a significant release was observed on the soil beneath the buckets. These buckets of hydraulic oil are not considered a REC associated with the subject site.

Two steel storage containers are located in the northwest portion of the subject site. Access was not granted to these storage containers during the subject site reconnaissance; however, the onsite farmers stated that fertilizers, soil, minor amounts of pesticides, and tools are stored within the containers. No evidence of a significant release was observed on the soil around the containers. One boring was drilled near the containers during our Limited Phase II ESA and no significant contamination was identified. These containers are not considered a REC associated with the subject site.

One approximately 75-gallon steal aboveground storage tank (AST) was observed in the northwest portion of the subject site. The AST was stored on pallets and evidence of a minor release was observed on the soil beneath the AST. One boring was drilled within the stained area during our Limited Phase II

ESA and no significant contamination was identified. This AST is not considered a REC associated with the subject site.

Two empty plastic ASTs, approximately 100 to 250 gallons in size, were observed within the northwest portion of the subject site. According to the onsite farmers, one AST was previously used to store water and the other was used to store pesticides. No evidence of a significant release was observed beneath the ASTs. Four borings were drilled within the area of the ASTs during our Limited Phase II ESA and no significant contamination was identified. These ASTs are not considered a REC associated with the subject site.

Two steel ASTs, approximately 250 gallons in size, were observed mounted to a tractor in the northwest portion of the subject site. According to the onsite farmers, the ASTs are used to apply fertilizer to the fields. No evidence of a significant release was observed beneath the ASTs. Four borings were drilled within the area of the ASTs during our Limited Phase II ESA and no significant contamination was identified. These ASTs are not considered a REC associated with the subject site.

One plastic AST, approximately 250 gallons in size, was observed in the northwest portion of the subject site, near the existing water well. According to the onsite farmers, the AST is used to store fertilizer. No evidence of a significant release was observed beneath the AST. Four borings were drilled within the area of the AST during our Limited Phase II ESA and no significant contamination was identified. This AST is not considered a REC associated with the subject site.

A search of selected government databases was conducted by Leighton using the EDR Radius Report environmental database report system. The subject site was not identified in the EDR database report.

Leighton conducted a Limited Phase II ESA of the subject site. Our scope of work for this assessment included the testing of soil and groundwater throughout the subject site for OCPs and arsenic that may be present in the near surface soil due to the current and historical agricultural use of the property. Additionally, soil samples collected in the vicinity of the diesel AST in the northwest portion of the subject site were assessed for the presence of petroleum hydrocarbons. The findings of our Limited Phase II ESA of the subject site were as follows:

DRAFT

- OCPs were not detected in analyzed composite soil samples at concentrations exceeding residential screening levels.
- Arsenic was not detected in analyzed soil samples at concentrations exceeding laboratory detection limits.
- TPH was not detected in analyzed soil samples at concentrations exceeding laboratory detection limits.
- OCPs were not detected in groundwater samples at concentrations exceeding laboratory detection limits.
- Arsenic was not detected in groundwater samples at concentrations exceeding laboratory detection limits.

8.2 Offsite

Historically, the adjacent properties were primarily developed in the 1960s and 1970s as residential properties and as parkland to the west in the 1970s.

Currently, the subject site is bordered to the north and east by residential properties; to the south by Heil Avenue, followed by residential properties; and to the west by Euclid Street, followed by Mile Square Regional Park.

8.3 Data Gaps

No significant data gaps were identified by Leighton.

DRAFT

9.0 OPINION

9.1 Onsite

It is Leighton's opinion that no RECs, HRECs, or CRECs have been identified for the subject site.

9.2 Offsite

It is Leighton's opinion that no offsite RECs, HRECs, or CRECs were identified that would negatively impact the subject site.

DRAFT

10.0 CONCLUSIONS

Leighton has performed a Phase I and Limited Phase II ESA in conformance with the scope and limitations of ASTM E1527-13 of the property located at 16300 Euclid Street in the city of Fountain Valley, Orange County, California. Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report. This assessment has revealed no evidence of RECs, CRECs, or HRECs in connection with the subject site.

Although not considered a REC, if the onsite water well will not be utilized during future redevelopment of the subject site it should be abandoned in accordance with local and state guidelines.

In general, observations should be made during future property development for areas of possible contamination such as, but not limited to, the presence of underground facilities, railroads, buried debris, waste drums, and tanks, stained soil or odorous soils. Should such materials be encountered, further investigation and analysis may be necessary at that time.

DRAFT

11.0 DEVIATIONS

Leighton did not deviate from or alter the scope of work, as defined in Section 1.3 of this report. Significant data gaps were not identified that affect the ability of Leighton to identify RECs at the subject site.

DRAFT

12.0 ADDITIONAL SERVICES

Leighton did not perform work outside the scope of work as defined in Section 1.3 of this report.

DRAFT

13.0 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

13.1 Corporate

Leighton is a California corporation, providing geotechnical and environmental consulting services throughout California. We are solely a consulting firm without interests in real property other than our office locations in Southern California. We provide professional environmental consulting services including application of science and engineering to environmental compliance, hazardous materials/waste assessment and cleanup, and management of hazardous, solid and industrial waste. Phase I Environmental Site Assessments are a part of this practice area and have been conducted by us.

13.2 Individual

The qualifications of the Principle Geologist and the other Leighton environmental professionals involved in this Phase I and limited Phase II ESA meet the Leighton corporate requirements for performing Phase I and Limited Phase II ESAs as specified by ASTM E1527-13. In addition, Ms. Brynn McCulloch is a Professional Geologist (PG).

13.3 Environmental Professional Statement

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional, as defined by §312.10 of 40 CFR Part 312.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. I have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Any special terms or conditions:

Please contact user prior to any site investigation.

Any other pertinent knowledge or experience with the property (e.g., prior reports, documents, correspondence concerning the environmental conditions of the property):

Phase I ESA was conducted back in 2015.

(1). Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25).

Did a search of recorded land title records (or judicial records where appropriate identify any environmental liens filed or recorded against the property under federal, tribal, state or local law? ☐ Yes | ■ No

If Yes, Describe:

(2). Activity and land use limitations (AULs) that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26).

Did a search of recorded land title records (or judicial records where appropriate) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law? ☐ Yes | ■ No

If Yes, Describe:

(3). Specialized knowledge or experience of the person seeking to qualify for the Landowners Liability Protections (LLP) (40 CFR 312.28).

Do you have any specialized knowledge or experience related to the property or the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?
☐ Yes | ■ No

If Yes, Describe:

(4). Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 DRF 312.29).

Does the purchase price being paid for this property reasonably reflect the fair market value of the property?

■ Yes | ☐ No

If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property? ☐ Yes | ■ No

If Yes, Describe:

(5). Commonly known or reasonable ascertainable information about the property (40 CFR 312.30).

Are you aware of commonly known or *reasonably ascertainable* information about the property that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example, as user,

(a.) Do you know the past uses of the property? ☐ Yes | ☐ No

(b.) Do you know of specific chemicals that are present or once were present at the property? ☐ Yes | ☐ No

(c.) Do you know of spills or other chemical releases that have taken place at the property? ☐ Yes | ☐ No

(d.) Do you know of any environmental cleanups that have taken place at the property? ☐ Yes | ☐ No

If Yes, Describe: See existing Phase I from 2015 for reference.

(6). The degree of obviousness of the presence of likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

Based on your knowledge and experience related to the *property* are there any *obvious* indicators that point to the presence or likely presence of contamination at the *property?* ■ Yes | ☐ No

If Yes, Describe: See existing Phase I from 2015 for reference.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/22/2021 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/23/2021 has revealed that there are 7 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 6 LUST sites within approximately 0.5 miles of the target property.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/22/2021 has revealed that there are 18 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

Quarterly Update: Safety-Kleen Systems, Inc, Santa Ana, CA, QUARTERLY UPDATE Quarterly Update Period: July 2020 - September 2020 DTSC received and reviewed the Non-RCRA Hazardous Waste Classification Study report, submitted July 31, 2020, and amended August 10, 2020, in response to the Special Condition 10 of Part V in the Hazardous Waste Facility Permit issued on June 24, 2019 to the Facility. Comments on the Report was sent to the Facility on September 15, 2020. On March 30, 2020, DTSC received a revised Scope of Work for Non-RCRA Waste Classification. DTSC reviewed and approved their work plan for waste classification analysis on April 16, 2020. FACILITY DESCRIPTION/ HISTORY Safety-Kleen Systems, Inc. (Safety-Kleen) began operation at the Santa Ana facility in 1968 to provide mineral spirit solvent reclamation and supply service for customers primarily engaged in vehicle repair shops, industrial maintenance, and dry cleaning. The Facility provides parts cleaning services, which involve parts degreasing units, consisting of a sink affixed to the top of a 16- or 30-gallon drum of cleaner solvent. Safety-Kleen is also engaged in providing generators with aqueous corrosive cleaners, and immersion cleaners (carburetor cleaner) for

SAFETY-KLEEN SYSTEMS INC (Continued) **1000224428**

use in the degreasing units. The units are emptied and the hazardous materials are refilled by the Safety-Kleen truck operators at customer sites, and the trucks transport the used materials back to the Facility. The hazardous waste solvents from the Facility are eventually transported another permitted facility for recycling, treatment and/or disposal. The Facility stores and transfers hazardous wastes in drums/containers and tanks as described in Part IV of the existing Permit. The Permittee provides the following services which lead to the off-site generation of hazardous waste that the Permittee transports back to the Facility. 1. Aqueous-Based Parts Washing Solution 3. Safety-Kleen Immersion or Carburetor Cleaner Service 4. Safety-Kleen Dry Cleaner Service 5. Safety-Kleen Paint Collection Service 6.

Violation Description:	Failure to comply with one or more of the designated operator monthly inspection requirements: failed to inspect the monthly alarm history report; attach a copy of the alarm history; failed to inspect for the presence of liquid or debris in the spill container/spill bucket and under dispenser containment; failed to inspect the under dispenser containment to ensure that monitoring equipment is placed in the proper position; failure to inspect for liquid or debris in the containment sump where an alarm occurred or for which there is no record of a service visit; or failure to check that all testing and maintenance has been completed and documented.
Violation Notes:	Returned to compliance on 03/08/2017. The designated operator monthly reports are insufficient due to: - The alarm history only includes sensors L1-L12. L17-L24 (UDC sensors) are not included. - Spill bucket inspection information is incomplete for the July 2015, August 2015, and November 2015 reports. No follow up details are provided. Please obtain the complete alarm history for the next monthly report and submit it, along with a copy of the report, to this Agency, within 30 days. Please ensure that all fields are completed accurately, and that any required follow up activity is documented.

Violation Description:	UST Program -General - Must include violation description, proper statute and regulation citation in the "comment" section.
Violation Notes:	Returned to compliance on 12/26/2018. According to Title 23 Section 2631(a) "Primary containment shall be product tight." As seen in the attached photographs taken during the inspection, the primary piping is leaking material into the turbine sump of Tank #1. The material is crystallizing inside the sump and on the primary piping, clearly indicating that the primary containment is not "product tight". Please remove the crystallized material from the sump and dispose of it as hazardous waste. Please submit the hazardous waste manifest with that material to this agency within 30 days. Please seal your primary piping to make the primary containment product tight. Please submit proof of these repairs to this agency within 30 days. Please check ochealthinfo.com to determine if your repairs require a plan check.

Eval Notes:	SR0124379 On site for final inspection for repairs to UDC containment, installation of UDC monitoring equipment, and replacement of sensor T2 sump. The facility has 8 metal pans at grade that serve as containment for the pressurized piping of the solvent-dispensing system. Pans that initially failed testing were sealed with a 2-part marine coating (sections 1, 4, 7, 8). Eight Veeder Root m#208 sensors were installed for UDC monitoring. A m#205 sensor in the T2 sump was replaced with m#208. The secondary piping for the solvent was affixed with a containment fitting to complete the secondary containment behind the building where the piping exits the ground. The UDC sensors were submerged in fluid, triggering an audible/visual alarm and turbine shutdown on both pressurized systems. The sensor in the T2 sump also triggered audible/visual alarm and turbine shutdown. The UDCs were tested hydrostatically. UDCs 1, 2, 3, 4, 6, and 8 passed two consecutive 15-minute tests. [Truncated]

The following were observed: - 8000 gallons of Oils (drums and totes) Storage has secondary containment. The SPCC Plan was reviewed. The plan was self-certified. The SPCC plan listed 15,000 gallons of aboveground petroleum product. If the facility has more than 10,000 gallons of aboveground petroleum product on site, Safety Kleen will have to get a full SPCC plan completed that is certified by a Professional Engineer. If the facility has less than 10,000 gallons of aboveground petroleum, please adjust your current SPCC plan. Any SPCC plan must be re-certified every 5 years. Training records and monthly inspection records were reviewed.

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

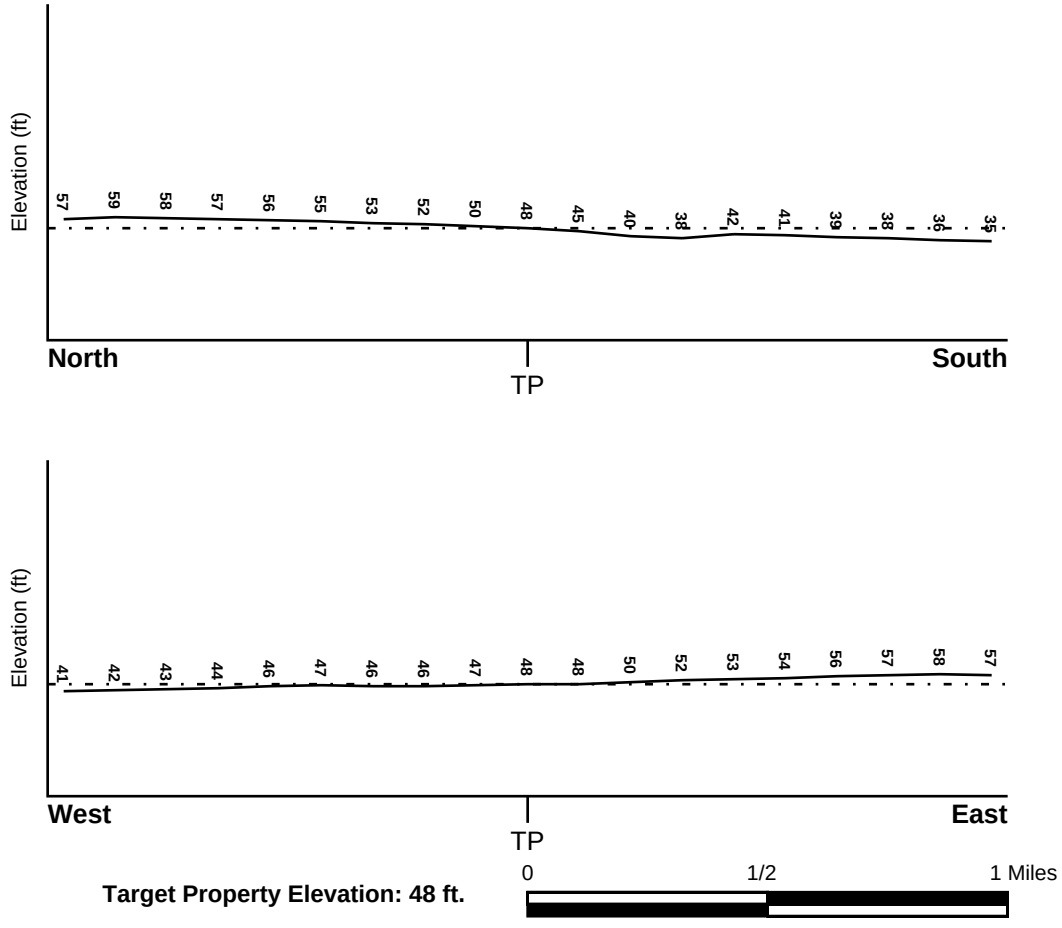
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 48 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: METZ

Soil Surface Texture: loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeymen:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use (s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

APPENDIX H

Important Information about This

Geoenvironmental Report

Geoenvironmental studies are commissioned to gain information about environmental conditions on and beneath the surface of a site. The more comprehensive the study, the more reliable the assessment is likely to be. But remember: Any such assessment is to a greater or lesser extent based on professional opinions about conditions that cannot be seen or tested. Accordingly, no matter how many data are developed, risks created by unanticipated conditions will always remain. *Have realistic expectations.* Work with your geoenvironmental consultant to manage known and unknown risks. Part of that process should already have been accomplished, through the risk allocation provisions you and your geoenvironmental professional discussed and included in your contract's general terms and conditions. This document is intended to explain some of the concepts that may be included in your agreement, and to pass along information and suggestions to help you manage your risk.

Beware of Change; Keep Your Geoenvironmental Professional Advised

The design of a geoenvironmental study considers a variety of factors that are subject to change. Changes can undermine the applicability of a report's findings, conclusions, and recommendations. *Advise your geoenvironmental professional about any changes you become aware of.* Geoenvironmental professionals cannot accept responsibility or liability for problems that occur because a report fails to consider conditions that did not exist when the study was designed. Ask your geoenvironmental professional about the types of changes you should be particularly alert to. Some of the most common include:

- modification of the proposed development or ownership group,
- sale or other property transfer,
- replacement of or additions to the financing entity,
- amendment of existing regulations or introduction of new ones, or
- changes in the use or condition of adjacent property.

Should you become aware of any change, *do not rely on a geoenvironmental report.* Advise your geoenvironmental professional immediately; follow the professional's advice.

Recognize the Impact of Time

A geoenvironmental professional's findings, recommendations, and conclusions cannot remain valid indefinitely. The more time that passes, the more likely it is that important latent changes will occur. *Do not rely on a geoenvironmental report if too much time has elapsed since it was completed.* Ask your environmental professional to define "too much time." In the case of Phase I Environmental Site Assessments (ESAs), for example, more than 180 days after submission is generally considered "too much."

Prepare To Deal with Unanticipated Conditions

The findings, recommendations, and conclusions of a Phase I ESA report typically are based on a review of historical information, interviews, a site "walkover," and other forms of noninvasive research. When site subsurface conditions are not sampled in any way, the risk of unanticipated conditions is higher than it would otherwise be.

While borings, installation of monitoring wells, and similar invasive test methods can help reduce the risk of unanticipated conditions, *do not overvalue the effectiveness of testing.* Testing provides information about actual conditions only at the precise locations where samples are taken, and only when they are taken. Your geoenvironmental

professional has applied that specific information to develop a general opinion about environmental conditions. *Actual conditions in areas not sampled may differ (sometimes sharply) from those predicted in a report.* For example, a site may contain an unregistered underground storage tank that shows no surface trace of its existence. *Even conditions in areas that were tested can change*, sometimes suddenly, due to any number of events, not the least of which include occurrences at adjacent sites. Recognize, too, that *even some conditions in tested areas may go undiscovered,* because the tests or analytical methods used were designed to detect only those conditions assumed to exist.

Manage your risks by retaining your geoenvironmental professional to work with you as the project proceeds. Establish a contingency fund or other means to enable your geoenvironmental professional to respond rapidly, in order to limit the impact of unforeseen conditions. And to help prevent any misunderstanding, identify those empowered to authorize changes and the administrative procedures that should be followed.

Do Not Permit Any Other Party To Rely on the Report

Geoenvironmental professionals design their studies and prepare their reports to meet the specific needs of the clients who retain them, in light of the risk management methods that the client and geoenvironmental professional agree to, and the statutory, regulatory, or other requirements that apply. The study designed for a developer may differ sharply from one designed for a lender, insurer, public agency...or even another developer. *Unless the report specifically states otherwise, it was developed for you and only you.* Do not unilaterally permit any other party to rely on it. The report and the study underlying it may not be adequate for another party's needs, and you could be held liable for shortcomings your geoenvironmental professional was powerless to prevent or anticipate. Inform your geoenvironmental professional when you know or expect that someone else—a third-party—will want to use or rely on the report. *Do not permit third-party use or reliance until you first confer with the geoenvironmental professional who prepared the report.* Additional testing, analysis, or study may be required and, in any event, appropriate terms and conditions should be agreed to so both you and your geoenvironmental professional are protected from third-party risks. *Any party who relies on a geoenvironmental report without the express written permission of the professional who prepared it and the client for whom it was prepared may be solely liable for any problems that arise.*

Avoid Misinterpretation of the Report

Design professionals and other parties may want to rely on the report in developing plans and specifications. They need to be advised, in writing, that their needs may not have been considered when the study's scope was developed, and, even if their needs were considered, they might misinterpret geoenvironmental findings, conclusions, and recommendations. *Commission your geoenvironmental professional to explain pertinent elements of the report to others who are permitted to rely on it, and to review any plans, specifications or other instruments of professional service that incorporate any of the report's findings, conclusions, or recommendations.* Your geoenvironmental professional has the best understanding of the issues involved, including the fundamental assumptions that underpinned the study's scope.

Give Contractors Access to the Report

Reduce the risk of delays, claims, and disputes by giving contractors access to the full report, *providing that it is accompanied by a letter of transmittal that can protect you* by making it unquestionably clear that: 1) the study was not conducted and the report was not prepared for purposes of bid development, and 2) the findings, conclusions, and recommendations included in the report are based on a variety of opinions, inferences, and assumptions and are subject to interpretation. Use the letter to also advise contractors to consult with your geoenvironmental professional to obtain clarifications, interpretations, and guidance (a fee may be required for this service), and that—in any event—they should conduct additional studies to obtain the specific type and extent of information each prefers for preparing a bid or cost estimate. Providing access to the full report, with the appropriate caveats, helps prevent formation of adversarial attitudes and claims of concealed or differing conditions. If a contractor elects to ignore the warnings and advice in the letter of transmittal, it would do so at its own risk. Your geoenvironmental professional should be able to help you prepare an effective letter.

Do Not Separate Documentation from the Report

Geoenvironmental reports often include supplemental documentation, such as maps and copies of regulatory files, permits, registrations, citations, and correspondence with regulatory agencies. If subsurface explorations were performed, the report may contain final boring logs and copies of laboratory data. If remediation activities occurred on site, the report may include: copies of daily field reports; waste manifests; and information about the disturbance of subsurface materials, the type and thickness of any fill placed on site, and fill placement practices, among other types of documentation. *Do not separate supplemental documentation from the report. Do not, and do not permit any other party to redraw or modify any of the supplemental documentation for incorporation into other professionals' instruments of service.*

Understand the Role of Standards

Unless they are incorporated into statutes or regulations, standard practices and standard guides developed by the American Society for Testing and Materials (ASTM) and other recognized standards-developing organizations (SDOs) are little more than aspirational methods agreed to by a consensus of a committee. The committees that develop standards may not comprise those best-qualified to establish methods and, no matter what, no standard method can possibly consider the infinite client- and project-specific variables that fly in the face of the theoretical "standard conditions" to which standard practices and standard guides apply. In fact, these variables can be so pronounced that geoenvironmental professionals who comply with every directive of an ASTM or other standard procedure could run afoul of local custom and practice, thus violating the standard of care. Accordingly, when geoenvironmental professionals indicate in their reports that they have performed a service "in general compliance" with one standard or another, it means they have applied professional judgement in creating and implementing a scope of service designed for the specific client and project involved, and which follows some of the general precepts laid out in the referenced standard. To the extent that a report indicates "general compliance" with a standard, you may wish to speak with your geoenvironmental professional to learn more about what was and was not done. *Do not assume a given standard was followed to the letter.* Research indicates that that seldom is the case.

Realize That Recommendations May Not Be Final

The technical recommendations included in a geoenvironmental report are based on assumptions about actual conditions, and so are preliminary or tentative. Final recommendations can be prepared only by observing actual conditions as they are exposed. For that reason, you should retain the geoenvironmental professional of record to observe construction and/or remediation activities on site, to permit rapid response to unanticipated conditions. *The geoenvironmental professional who prepared the report cannot assume responsibility or liability for the report's recommendations if that professional is not retained to observe relevant site operations.*

Understand That Geotechnical Issues Have Not Been Addressed

Unless geotechnical engineering was specifically included in the scope of professional service, a report is not likely to relate any findings, conclusions, or recommendations about the suitability of subsurface materials for construction purposes, especially when site remediation has been accomplished through the removal, replacement, encapsulation, or chemical treatment of on-site soils. The equipment, techniques, and testing used by geotechnical engineers differ markedly from those used by geoenvironmental professionals; their education, training, and experience are also significantly different. If you plan to build on the subject site, but have not yet had a geotechnical engineering study conducted, your geoenvironmental professional should be able to provide guidance about the next steps you should take. The same firm may provide the services you need.

Read Responsibility Provisions Closely

Geoenvironmental studies cannot be exact; they are based on professional judgement and opinion. Nonetheless, some clients, contractors, and others assume geoenvironmental reports are or certainly should be unerringly precise. Such assumptions have created unrealistic expectations that have led to wholly unwarranted claims and disputes. To help prevent such problems, geoenvironmental professionals have developed a number of report provisions and contract terms that explain who is responsible for what, and how risks are to be allocated. Some people mistake these for "exculpatory clauses," that is, provisions whose purpose is to transfer one party's rightful responsibilities and liabilities to someone else. Read the responsibility provisions included in a report and in the contract you and your geoenvironmental professional agreed to. *Responsibility provisions are not "boilerplate."* They are important.

Rely on Your Geoenvironmental Professional for Additional Assistance

Membership in the Geoprofessional Business Association exposes geoenvironmental professionals to a wide array of risk management techniques that can be of genuine benefit for everyone involved with a geoenvironmental project.
